

325%

IMPROVEMENT

Leading the Imaging Evolution with Auto-Fluorescence.

PINPOINT™ real-time auto-fluorescence bronchoscopy significantly improves the management of patients with lung cancer.

PINPOINT

REAL-TIME IMAGING

Auto-fluorescence bronchoscopy is now recommended in the ACCP Evidence Based Clinical Practice Guidelines.

Clinical studies indicate the use of PINPOINT, the only auto-fluorescence technology to provide images in real-time, results in a 325%

improvement in detecting cancers when compared to conventional white light bronchoscopy. ¹

- ▶ Improve the delivery of surgical and endoluminal therapies such as PDT
- ▶ Enable treatments in patients once deemed untreatable
- ▶ Improve patient survival through early detection and treatment
